Collection and delivery charges?

Each of the domestic machines listed are very similar to one another. However the commercial machines are designed for larger areas of carpet cleaning.

My recommendation; I would personally go with the cheaper machine first. There is a system which will dramatically increase your carpet cleaning results, if you're interested. You can use any of the machines available from the list above.

Most professional carpet cleaners, they never recommend DIY carpet cleaning. They invest in great big powerful machines. These machines are designed to clean carpets thoroughly. But there is a way for you to **bypass** the professional advice and do your own carpet cleaning. Defy the pro's reasons for avoiding DIY, ie, you need a big powerful machine to clean a carpet. YOU DON'T!

The simple system is available to you here if you would like to know more. All of the domestic machines listed above are perfectly good with this simple advanced DIY carpet cleaning method. A little effort is required, but the rewards for doing so are a longer lasting cleaning result which is several times better than traditional DIY carpet cleaning results. In fact, results are equally as good as any pro would manage to do.
